AI ARCHITECT SPECIALIST & DATA SCIENTIST

Enterprise AI Agents | Predictive Modeling | Credit Risk Decisioning | Machine Learning

AREAS OF EXPERTISE

- Enterprise AI Architecture: Internal AI Agents, Agentic Workflows, LLM Applications, Retrieval-Augmented Generation (RAG), Tool Integration, API Integration, Context Management, Prompt Engineering
 - Cloud and Analytics Architecture: Google Cloud Platform (GCP), AWS SageMaker, Spark, Analytics Automation, ETL Pipelines, Scalable Data Processing, Enterprise System Integration
 - Statistical Machine Learning: GBM/XGBoost, Random Forest, Logistic Regression, SVM, KNN, AdaBoost, LSTM, Deep Learning
 - Risk and Decision Science: Credit Risk Modeling, Fraud Detection and Prevention, Underwriting Optimization, Credit Scoring, Alternative Data, Predictive Risk Modeling
 - Responsible and Explainable AI: Model Explainability, Reason-Code Development, Model Evaluation, FCRA Compliance, AI Governance, Transparent Decisioning
 - Optimization and Advanced Analytics: Stochastic Processes, Linear Programming, Multi-Objective Optimization, Hyperparameter Tuning, Feature Engineering
 - Programming and Tools: Python, SQL, SAS, Spark, Scikit-learn, TensorFlow, Pandas, Git, Angoss
 - Technical Leadership: AI Solution Design, Cross-Functional Collaboration, Stakeholder Management, Legacy-System Modernization, Production Implementation
 - Certification: Deep Learning Specialization
-

PROFESSIONAL SUMMARY

AI Architect Specialist and senior data science professional with 13+ years of experience delivering enterprise AI, machine learning, and decision-science solutions across banking, fintech, specialty finance, and consumer lending.

Currently architecting an internal AI agent for analytics on Google Cloud Platform (GCP), enabling Data & Analytics teams to accelerate data exploration, analytical development, code generation, and repeatable workflows. Skilled at translating business requirements into scalable AI architectures that integrate agents, enterprise data, analytical tools, and cloud services.

Deep expertise in FCRA and non-FCRA credit risk modeling, fraud detection, underwriting optimization, model explainability, and analytics automation. Proven record of leading end-to-end model development, modernizing legacy SAS processes, integrating complex datasets, and delivering measurable results, including a 13% reduction in fraud leads and a 30% improvement in lender lead prices.

Combines strong financial-domain knowledge with modern AI architecture to build reliable, explainable, and production-ready solutions for regulated enterprise environments.

PROFESSIONAL EXPERIENCE

EQUIFAX, INC., San Jose, California

Ai Architect Specialist – Consumer Analytics, 7/2026 to Present

Architecting enterprise AI capabilities that help Data & Analytics teams work more efficiently with data, analytical tools, and cloud services.

- Architecting an internal AI agent for analytics on GCP, enabling Data & Analytics teams to accelerate data exploration, analytical development, code generation, and repeatable workflows.
- Defining solution architecture across agent orchestration, tool integration, context management, and GCP-based analytics services to support scalable enterprise use cases.
- Translating data discovery, SQL and code assistance, analysis, reporting, and workflow-automation needs into reusable AI-agent capabilities.
- Collaborating with analytics, engineering, and business stakeholders to identify high-value use cases, establish evaluation criteria, and guide responsible adoption.
- Applying deep experience in financial analytics, model development, and regulated decisioning to improve the reliability, explainability, and practical value of AI-generated outputs.
- Developing architectural patterns that connect generative AI capabilities with enterprise data and existing analytical workflows while supporting security, governance, and operational requirements.

EQUIFAX, INC., San Jose, California

Data Scientist Specialist – Banking and Lending, 7/2024 to 7/2026

Developed credit risk models served for fintech and subprime client and streamlining processes to improve client outcomes. Demonstrated technical leadership by solving compliance challenges and driving automation efforts.

- Led the end-to-end development of a non-FCRA risk model tailored for a major payment processing company, leveraging Equifax data assets to optimize credit decisioning and enable better risk segmentation for small business clients.
- Designed and implemented a robust FCRA-compliant credit risk model for the subprime auto lending vertical, addressing unique challenges in underwriting while improving approval rates and portfolio performance.
- Collaborated with credit unions and fintech companies to customize and deploy production-ready credit risk models, ensuring seamless integration into existing systems and adherence to regulatory requirements.
- Spearheaded the implementation of Gradient Boosting Machine (GBM) models, resolving compliance challenges related to black-box reason code issues. Developed transparent and interpretable model explanations to meet regulatory standards while maintaining high predictive performance.
- Led the modernization of process automation workflows by transitioning from legacy tools like SAS to advanced, scalable frameworks. Designed and implemented end-to-end automation solutions, improving efficiency, reducing operational costs, and ensuring seamless adoption across teams.

Data Scientist Specialist – Specialty Finance, 7/2018 to 6/2024

...Continued...

WEN ZHANG

PAGE THREE

Effectively delivered advanced analytics solutions and model automation to elevate specialty finance client portfolios. Played a key role in integrating alternative data and optimizing credit scoring strategies.

- Provided strategic guidance to clients on leveraging prime credit data in conjunction with the Advanced Machine Learning Engine (AME), enabling the evaluation of alternative data sources for improved credit risk insights. Delivered tailored solutions to enhance underwriting precision and portfolio performance.
- Facilitated integration between Teletrack(top Specialty Finance Consumer information owner) and Equifax analytics teams, effectively bridging disparate data systems and workflows. Streamlined processes for unified data analysis, enabling seamless collaboration and unlocking new analytics capabilities across platforms.
- Designed a flexible and reusable generic credit scoring model for the specialty finance vertical, addressing the unique needs of subprime borrowers. The model significantly improved accuracy and scalability for diverse lending products.
- Partnered with AME development teams to redesign and enhance automation pipelines for sparse data processing. Introduced innovative techniques to streamline hyperparameter tuning and feature engineering, reducing model development time and improving predictive performance.

DATAx, LTD, Las Vegas, Nevada

Data Scientist II (Fraud / Underwriting), 3/2017 to 07/2018

Focused on fraud and underwriting, partnering with multiple lending clients to develop underwriting rule improvement strategies via Angoss decision tree. Perform SAS-based data mining and cleansing.

- Analyzed Teletrack acquisition data to integrate and build the largest consumer database in the specialty finance sector, enabling improved analytics and client decision-making.
- Designed and deployed a price-reject model for a key client portfolio, leveraging discrete optimization techniques to maximize profitability and minimize risk.
- Created a scalable modeling pipeline to automate hyperparameter tuning and WOE bin adjustments, enhancing model development speed and accuracy.
- Implemented advanced feature processing pipelines to handle sparse data efficiently, improving the predictive power of risk models.

PARTNERWEEKLY, LLC, Las Vegas, Nevada

Data Scientist, 11/2012 to 3/2017

Led machine learning initiatives to optimize financial services processes and reduce fraud risk. Collaborated with clients on strategies to enhance business performance and drive market growth.

- Analyzed Teletrack acquisition data to integrate and build the largest consumer database in the specialty finance sector, enabling improved analytics and client decision-making.
- Designed and implemented robust machine learning systems for customer risk profiling and fraud detection, incorporating advanced algorithms to improve the accuracy and reliability of risk assessments in real-time.

WEN ZHANG

PAGE TWO

- Achieved a 13% reduction in fraud leads and a 30% improvement in lender lead prices by leveraging data-driven optimization strategies, including targeted adjustments to underwriting and lead allocation processes.
 - Developed and deployed real-time analytics systems and interactive dashboards, providing actionable insights and ensuring efficient KPI monitoring for better decision-making and operational control.
 - Utilized advanced clustering techniques to optimize advertising budgets, effectively reallocating resources to maximize financial media spend and improve campaign ROI.
-

EDUCATIONAL BACKGROUND

Deep Learning Specialization, 2018

COURSERA

Nanodegree in Machine Learning Engineer, 2016

UDACITY

Master of Science in Applied Statistics & Operational Research, 2012

BOWLING GREEN STATE UNIVERSITY, Bowling Green, Ohio

Bachelor of Science in Applied Mathematics, 2010

SHANGHAI JIAOTONG UNIVERSITY, Shanghai, China
